

Commands taken from Practical 9

```
# Make new folder and move into it
mkdir $HOME/Project && cd $HOME/Project

# Download Prac 9 files which contain the Hadoop environment and the Docker Compose for the
HDFS Spark
curl -L -o MLlib.zip https://www.dropbox.com/s/388xpkjkc5bwyv/MLlib.zip?dl=0

# Install and unzip
sudo apt-get install -y unzip
unzip MLlib.zip

# Start the containers
docker-compose -f docker-compose_hdfs_spark.yml up -d

# Open the Jupyter Notebook
http://external_ip:8888

Manually upload files into the work folder and create new folder called 'Project'

# Copy from Jupyter to local machine
docker cp jupyternb:/home/jovyan/work/Project ~/Project

# Copy from local machine to namenode container
docker cp ~/Project namenode:/home/Project

# Log into the namenode container
docker exec -it namenode bash

# Save files into HDFS
hdfs dfs -mkdir -p /Project
hdfs dfs -put /home/Project/* /Project/
# Check
hdfs dfs -ls /Project
```

```
-----
OR manually upload to VM
# Copy local files into the namenode
docker cp ~/Project namenode:/home/Project

# Upload files to HDFS
docker exec -it namenode bash
hdfs dfs -mkdir -p /Project
hdfs dfs -put /home/Project/* /Project/
```
